

LegalGraph AI — Product Guide

Product, pricing, security and FAQ · Version 2026.3

1. Product overview

LegalGraph AI is a legal knowledge graph for in-house legal and compliance teams. It maps contracts, case law and regulations into one connected graph, so teams research faster, spot risk earlier, and get every answer with a citation back to the exact source clause, case or regulation.

Unlike a document search tool, which only finds documents, LegalGraph maps the relationships between clauses, cases and regulations, so an answer can explain *why* and show the exact source it came from.

Who it is for: legal and compliance teams at mid-market and enterprise companies (typically 5 to 500 legal professionals), plus law firms that manage large contract portfolios for clients.

2. Core features

Graph-powered research

Ask questions in plain language and get answers linked to the exact clause, case or regulation they come from — never a bare summary. Example: "What is our standard liability cap?" returns the playbook rule and the contracts that fall below it.

Contract intelligence

Extracts obligations, key dates, renewal and termination terms, and risks across the whole contract portfolio, and compares every contract against your playbook automatically. Deviations are flagged with the clause reference (for example, a liability cap below the playbook minimum).

Playbook automation

Encode your negotiation playbook (standard positions, fallback positions and red lines) once; LegalGraph checks every new contract against it during first-pass review. Available on the Business and Enterprise plans.

Regulatory tracking

When a regulation changes, LegalGraph shows exactly which contracts and internal policies are affected. Coverage includes GDPR, CCPA/CPRA, the EU AI Act, DORA and major US federal and state privacy laws.

AI assistant

An AI chat assistant is available on every page of the app, so anyone on the team can ask a question without opening a ticket. Every answer includes source citations.

Audit-ready by default

Every answer, extraction and edit is logged with a source citation, so the general counsel can trust what shipped and prove it.

3. How it works

1. **Connect** — upload contracts or connect your existing document store. No migration is required.
2. **Map** — LegalGraph builds entities and relationships across every document and keeps them current automatically.
3. **Ask & act** — research, review and report, with every answer explainable and cited back to its source.

Supported document formats: PDF (including scanned PDFs, via built-in OCR), Word (.docx) and plain text. Documents are typically searchable within 15 minutes of upload.

4. Integrations

LegalGraph connects to the document stores legal teams already use: **iManage, NetDocuments, SharePoint, Google Drive, Box and Dropbox**. Microsoft Word is supported through the LegalGraph add-in, which runs playbook checks while you draft. Single sign-on (SSO) is available through Okta, Microsoft Entra ID and Google Workspace on the Enterprise plan. A REST API is available on the Enterprise plan.

5. Pricing

Plan	Price	Includes
Team	\$79 per seat per month	Up to 10 seats · 5,000 documents · AI chat assistant · standard support (email, next business day). For small legal teams getting started with contract intelligence.
Business (most popular)	\$149 per seat per month	Unlimited seats · 50,000 documents · AI chat assistant with sales handoff · playbook automation · priority support (email and chat, 4-hour response). For legal teams running review and research across the organisation.
Enterprise	Custom pricing	Unlimited everything · SSO and custom role-based access control (RBAC) · dedicated customer success manager · custom data retention · REST API. For multinational legal and compliance organisations.

Billing: monthly or annual. Annual billing is available on all plans. Prices are in US dollars and exclude applicable taxes.

Free trial: the Team plan has a 14-day free trial with no credit card required. Business and Enterprise start with a 30-minute demo with our team.

6. Security and privacy

- Role-based access control, down to the clause.
- Encryption in transit (TLS 1.2+) and at rest (AES-256).
- A full audit log for every query and every edit.
- Your data is never used to train models shared across customers.
- SOC 2 Type II report available under NDA; GDPR-compliant data processing agreement (DPA) available on request.
- Data residency: customers choose US or EU hosting at sign-up.
- Uptime: 99.95% over the last 12 months.

7. Onboarding

Most teams are live within two weeks. Team plan customers onboard self-serve with guided setup. Business and Enterprise customers get a structured onboarding: a kickoff call, playbook set-up workshop, and connection of the document store. Enterprise customers are assigned a dedicated customer success manager.

8. Results customers report

- 92% faster first-pass contract review.
- 240+ legal teams onboard.
- 3.1 million clauses mapped.

"We cut first-pass contract review from two days to under an hour. The part our GC actually cares about: every answer traces back to a clause, so nothing gets rubber-stamped blind." — Deputy General Counsel, Northpeak

9. Frequently asked questions

How is LegalGraph different from a document search tool?

Search finds documents. LegalGraph maps the relationships between clauses, cases and regulations, so an answer can explain why — and show you the exact source it came from.

Can I use my existing document store?

Yes. Connect your existing repository or upload documents directly — no migration is required to get started.

Is my data used to train shared models?

No. Your documents and queries are never used to train models shared across customers.

Does the AI assistant replace legal judgment?

No. LegalGraph accelerates research and first-pass review with cited sources. Every output is meant to be checked by a licensed professional before it is relied on. LegalGraph does not provide legal advice.

How do I book a demo?

Book a 30-minute walkthrough with our team from the website, or ask the assistant to connect you with sales.

LegalGraph AI is a fictional company created as demo data for the LeadPilot AI prototype. All names, figures and customers in this guide are illustrative.
